

Electrical Energy

Only qualified persons should work on energy installations. Energy must be isolated.

- Follow appropriate isolation and de-energising procedures for live systems.
- Use lockout/tagout procedures to prevent accidental energisation.
- Ensure only competent personnel are involved in isolating live systems.
- Required permits must be approved by the PSCS.
- Where required, a detailed commissioning plan must be available.
- An inspection and maintenance plan must be in place.
- Ensure appropriate signage, communication, exclusion zones and warning systems are in place.

S|A|F|E|

Stop and Think 'What are the hazards in this scenario?' 'What could go wrong?'

Assess the task, the work area, and the equipment.

Follow the procedures, protocols, and method statement.

Engage with your supervisor if an aspect of the task changes and requires deviation from the plan.
